

Design and create space for data storage is the so-called store databases - it is a recent tendency to offer you a company de Sonic NET towards a scientific project systematic and objective in an integrated manner, and works through software and technology is extremely advanced in order to gather data your business profile in record time and saved on a CD crucifixion of storage, which would help speed decision-making at the right time - a so-called data store or store databases, and divided these data with regard to markets, customers, products, prices, quality, costs, and after-sales service ... To another with regard to any system, industrial, commercial or service to any facility, regardless of the fact that the facility-for-profit or Non profit, and not only that, but the aim is to link this information to each other for a set of conclusions, data and reports that can not be obtained standard methods. And we take example of this customer segment for example, and what can be achieved by your company de Sonic NET to create a customer base, in the cases now in use, we find that customer data does not contain only a limited number of data relating to each client and in view of the modern techniques were developed from studies of specific scientific produced specific examples of data required for each client, and through this data could be split and to identify customers, according to multiple items, including, for example, elements of stage and Sunni elements of the residential areas and elements of the rate of consumption, and many of the elements and determinants of other multilateral and which eventually led to the ability to make the right decision about directing a particular commodity to a residential area of a certain result that the rules of the data showed an increase in the rate of consumption of this commodity in the residential area from other areas, other residential.

Another example of what can we get from the results of the stores databases is with respect to a particular product where we are exposed to the product size and weight of the product and the price of the cost of mobilization of this product, also there is another example of the Bamliyn in the facility, and another example of working hours and production and Aigv command when certain limits It even goes beyond these limits for up to all the processes that take place both inside and outside the facility, regardless of the size of these operations.

There are several techniques are followed in the design of databases and storage to get the desired results, which will improve work performance and end to the increase and the growth of profits of the facility if it aims to gain or achieve its goals if it was not meant to profit, and the techniques used, we find planning interstellar medium depends on the agenda only one real show in front of the user, but it disappears from behind and several tables and fake working to help the real table in the compilation and analysis of data coming to him and presenting them as specified and requested through the master keys.

And is used in building and designing data stores programs such as SQL, Microsoft and Oracle are two of the most powerful software in this area, although there are other programs are run successfully and the difference in this matter is the needs of the entity itself.

We live in an era of revolutionary software technology and communications that are produced in our so-called smart Alistnaay, we now rely on this revolution in many of the details of our daily lives, and the most important products of this revolution, we find "data store" you will find in this technique the optimal solution for each decision for the benefit of your business In just a few minutes you will get the information and data required for the comparison between the results of

these data, we find that the resolution is quite clear and you'll not only recognize it as is or increase it or decrease it but in all cases I got the right decision through information and data completely incorrect, .

Why not start now to take advantage of this technological revolution, the enormous ... The company de Sonic NET you can start from now, step by step to bring you this boom in business, Your use of this technology
